Project

Job Hunting Website

It was my first project for learning purpose

Health Care Web Based Application

Healthcare Management System Developed a comprehensive Healthcare Management System as a final-year project, including: Three Sites Integration: Patient Site: Features include appointment scheduling, viewing services, and accessing health-related information. Doctor Site: Includes appointment management, notifications for new bookings, and doctor application processing. Admin Panel: Facilitates management of patient and doctor records, approval of doctor applications, and overall system administration. Key Features: User roles and permissions implemented to restrict access based on roles (Patient, Doctor, Admin). Appointment booking system with time slot management and pending approvals by doctors. Firebase Firestore database for secure and scalable data storage. Technologies Used: Frontend: React, Tailwind CSS Backend: Firebase Authentication, Firebase Firestore Achievements: Improved the efficiency of healthcare service delivery through automation. Enhanced user experience with a modern, responsive design and seamless navigation. This project showcases expertise in full-stack web development, system design, and implementing real-time features for dynamic user interactions. here my project link <https://patients-healthcare.ahmadbinayaz.com/doctors/aZr76mSsy8WI0XWYwqVAr5NtOA92>

Achievements & Awards

Passed Turing Assessment & Quiz Successfully completed Turing's rigorous technical assessment, demonstrating expertise in JavaScript
